

REAL Bruchovsky cohort — posterior-aware vs point-estimate clinical decisions

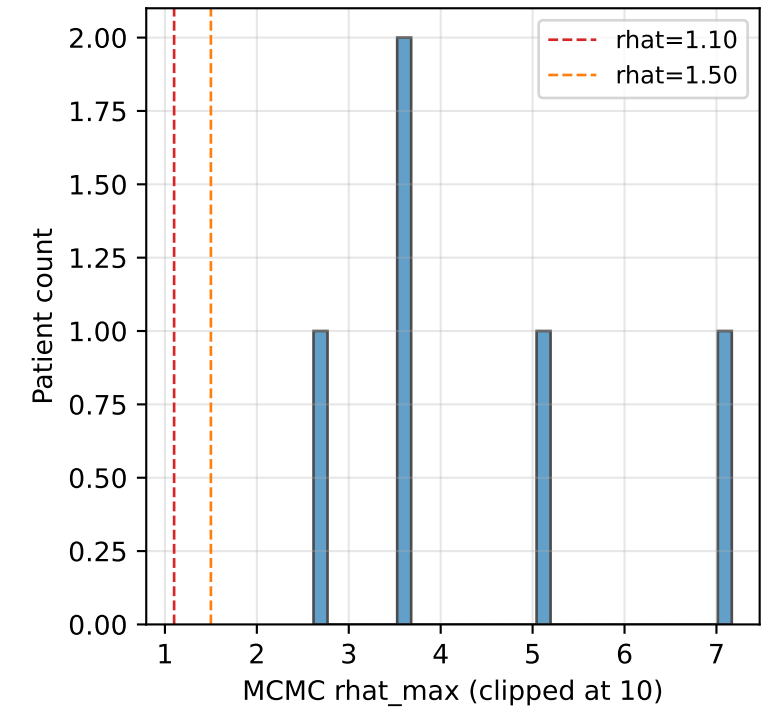

[A] Posterior-aware AT50-preference
(N=5 real patients)

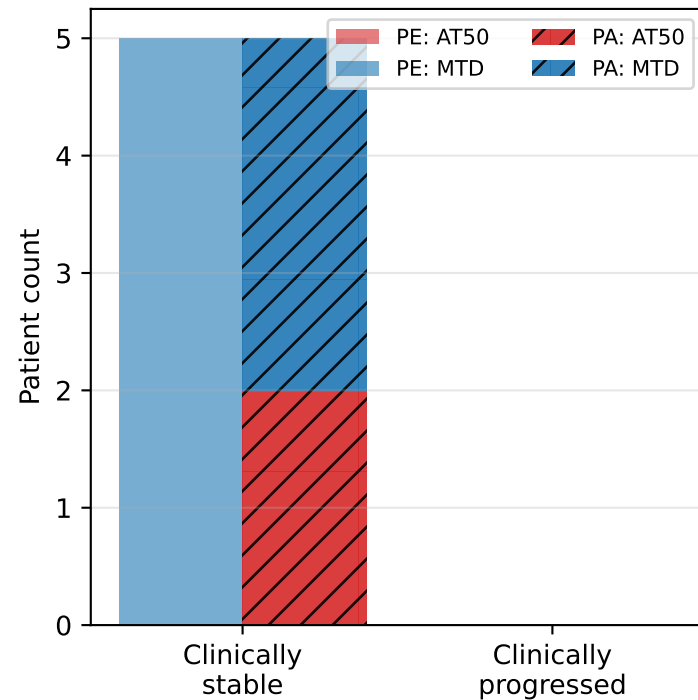

[B] PE vs PA per patient

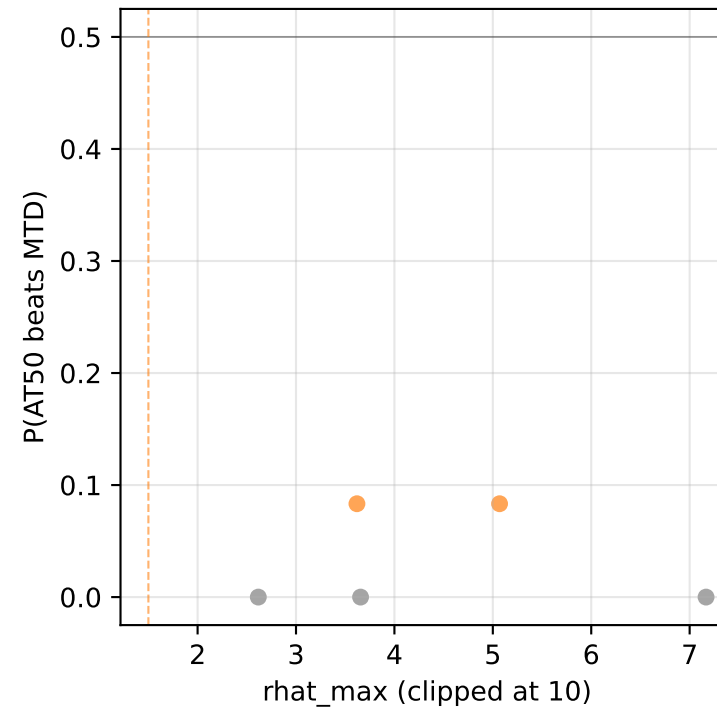

[C] Convergence (real-data MH)

[D] Recommendation by clinical status

[E] Convergence vs posterior preference

REAL BRUCHOVSKY COHORT (n=5)

Source: nicholasbruchovsky.com/dataTanaka.zip
Same cohort fit by Brady-Nicholls 2020, Strobl 2022, and Gallagher 2025.

MCMC convergence (rhat<1.50):
0/5 = 0%

Recommendations:

PE recommends AT50: 0/5 = 0%
PA recommends AT50: 2/5 = 40%

PE-vs-PA disagreement: 2/5 = 40%
Posterior-sensitive: 0/5
(10% < P(AT50 wins) < 90%)

This is the WP4 main empirical figure.
Phase 3 §3.3 + §3.4 deliverable on REAL data.
